

## ERASMUS + ACTIVITIES: 2nd grade

The pupils and their teacher went to the nearby playground, where they did some exercise aimed at revision.

The pupils had to name some objects made of wood or metal. They turned into little detectives looking for clues of mistreatment of the environment.

They have also learnt how to identify a type of tree when there are still no leaves. They took a closer look at the fir and beech tree. They compared the two trees and named the common qualities.

The pupils had a science day entitled Measurements. They performed it at the school playground. The pupils were divided into smaller groups, where each group got its own task.

The tasks were as follows:

- they had to measure the length and width of the soccer field, the length, height and width of a bench and the sandbox,
- they had to think about other measurement they could make,
- after the measurements they analyzed the results.
